

The Trinity Energy strategy provides access to one of the most dynamic segments of the global economy, oil, natural gas and renewables. Whether it be domestic production in the Bakken, mid-stream transportation, or the search for oil deep offshore Brazil, the cyclical nature of energy investing creates enormous opportunity for hedged investing.

In structuring our portfolio, we look to take advantage of these cyclical and secular trends and position assets with absolute positive return as the objective. Like all Trinity strategies, Energy uses long investments, short positions and cash to achieve this goal.

*The strategy invests or sells short securities in the following areas.*

<i>Integrated Majors</i>	<i>Oil Service</i>	<i>Onshore</i>	<i>Offshore</i>
<i>Oil &amp; Gas Exploration</i>	<i>Pipelines</i>	<i>Refining</i>	<i>Solar</i>
<i>Infrastructure</i>	<i>LNG</i>	<i>Transport</i>	<i>Finance</i>

The strategy is managed by an experienced energy specialist who has spent extensive time with management, in the field, and analyzing cycles. The same philosophy and process used to identify opportunities for Trinity Energy has proven successful in prior energy cycles.

Offered in a separately managed account form, where the investor has full view into the portfolio, the strategy provides liquidity, transparency, and a flat management fee without a performance carry or K-1 partnership reporting.

Trinity Energy is a powerful investment solution that enhances the return potential of a client’s investment portfolio. By harnessing the volatility of energy markets in a hedged structure the strategy contains the features needed to provide upside capture and downside protection over a full energy cycle.
